The gas flame arrester is designed and manufactured based on the principle that the flame extinguishes due to heat loss when it passes through the narrow pores of the thermal conductor. The flame retardant layer structure of flame arrester can be gravel type, wire mesh type or corrugated type. It is applicable to combustible gas pipelines, such as storage and irrigation or flare system of gasoline, kerosene, light diesel, benzene, toluene, crude oil and other oil products, gas purification and communication system, gas analysis system, coal mine gas discharge system, pipe network of fuel gas of heating furnace, and pipeline supplies of acetylene, oxygen, nitrogen and natural gas. The valve can be used together with the breather valve or separately.
