The global Gas-fueled Grill market size is predicted to grow from US\$ 4964 million in 2025 to US\$ 6849 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Gas-fueled Grill is a cooking appliance commonly used for outdoor grilling and barbecuing. It operates using gas, such as propane or natural gas, as a fuel source to produce heat for cooking food. Gas-fueled grills provide convenience, quick heat-up times, and precise temperature control, making them popular among outdoor cooking enthusiasts.

Key Driving Factors:

- 1. Changing Lifestyles:** Consumers are increasingly combining outdoor recreation, family gatherings, and other social activities with high-quality cooking experiences, directly stimulating demand for gas grills. Investing in backyard renovations and creating 'outdoor kitchens' is also prevalent in North America and Europe.
- 2. Convenience and Health Needs:** Compared to charcoal grills, gas grills ignite quickly, offer precise temperature control, and are easy to clean, perfectly catering to consumers' desire for 'easy' cooking in a fast-paced lifestyle. Meanwhile, 'healthier' cooking methods (such as reduced fat intake and smoke emissions) are also a significant market driver.
- 3. Economic and Urbanization Factors:** Globally, especially in emerging markets, rising disposable incomes have enabled households to purchase higher-quality, more expensive high-end grills. Urbanization and Western dietary habits (particularly in the Asia-Pacific region) have also brought a large influx of new users to the market.
