The global Gas Heat Pump System market size is predicted to grow from US\$ 29780 million in 2025 to US\$ 44040 million in 2031; it is expected to grow at a CAGR of 6.7% from 2025 to 2031.

It is often compared to a refrigerator, where a series of coils and heat pump compressors move warm air to and from the house. For instance, even during the winter, there is still a small amount of warm air outside that can then be captured and forced into the house. During the summer, the “heat pump” can also cool the house, forcing out warm air and pulling in the cold stuff. Gas heat pumps, on the other hand, have an engine operated by natural gas and utilize natural refrigerants, such as ammonia and water.

The gas heat pump system market has been growing due to increased awareness of energy efficiency, environmental concerns, and the need for innovative HVAC solutions.
