The global Gas Jet Compressors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Gas jet compressor is a jet pump that uses high-pressure steam, air, or gas motive to entrain lower-pressure steam, air, or gas suction and compress the mixture to a pressure higher than the suction pressure. The mixed gases then enter a venturi tail where they continue to mix, and then emerge from the tail at a pressure intermediate to those of the motive and suction fluids. Gas jet compressors are also sometimes referred to as Thermocompressors if the motive and suction phases are both steam.
