Gas permeability analyzer is a precision instrument used to measure the permeability of materials to gases (such as O₂, CO₂, N₂, etc.). It measures the rate at which gases pass through thin films or barrier materials to evaluate the barrier properties of materials. It is widely used in packaging, food, medicine, electronics, and new energy. Its core principles include differential pressure method, isobaric method, etc., and can detect key parameters such as permeability coefficient, solubility coefficient, and diffusion coefficient.
