Gas pole chainsaw is a portable garden tool powered by gasoline and used for pruning branches at high altitudes. It consists of a retractable long pole and a small gasoline chain saw mounted on the top of the pole, allowing operators to cut branches at high altitudes on the ground without the aid of a ladder. Gas pole chainsaws have the advantages of strong power, long working hours, and no power supply restrictions. They are widely used in orchard pruning, park maintenance, forestry clearing, and gardening projects. Compared with electric or battery pole saws, gasoline models are suitable for professional working environments that require higher cutting force and battery life.
