The global Gas Pressure Regulators and Gas Valves for Laboratory market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

In laboratory work, oxygen, nitrogen, hydrogen, argon and other gases are often used. These gases are generally stored in special high-pressure gas cylinders. When in use, the pressure reducing valve is used to reduce the gas pressure to the required range of the experiment, and then other control valves are used for fine adjustment to allow the gas to enter the use system. The pressure reducing valve is an essential accessory for the pneumatic control valve. Its main function is to reduce the pressure of the gas source and stabilize it to a fixed value so that the control valve can obtain a stable gas source power for regulation and control.
