The global Gas Pressure Springs market size is predicted to grow from US\$ 1336 million in 2025 to US\$ 1875 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

Gas Pressure Spring is a type of spring that, unlike a typical mechanical spring that relies on elastic deformation, uses compressed gas contained within an enclosed cylinder sealed by a sliding piston to pneumatically store potential energy and withstand external force applied parallel to the direction of the piston shaft. Common applications include automobiles (where they are incorporated into the design of struts that support the weight of the hatchback tailgate while they are open) and office chairs. They are also used in furniture, medical and aerospace applications. Much larger gas springs are found in machines that are used in industrial manufacturing (the press tooling industry), where the forces they are required to exert often range from 2500N to 400,000N (forty tonnes).

Automotive Industry Demand: Gas pressure springs are widely used in the automotive sector for applications such as tailgates, hoods, trunks, and seats. As the automotive industry continues to evolve with a focus on lightweighting, enhanced comfort, and advanced functionalities, the demand for gas pressure springs is expected to grow.

Furniture Industry Applications: Gas pressure springs are extensively used in the furniture industry for recliners, office chairs, height-adjustable desks, and cabinet doors. The demand for ergonomic and adjustable furniture is driving the market for gas pressure springs.

Aerospace and Aviation Industry: Gas pressure springs are utilized in aircraft interiors for overhead bins, seat adjustments, and other applications. The growth of the aerospace and aviation industry, including the demand for modern aircraft, is a significant driver for gas pressure springs.

Medical Equipment and Healthcare Industry: Gas pressure springs are critical components in various medical equipment such as hospital beds, patient chairs, and medical carts. The demand for advanced medical equipment with enhanced functionality and comfort drives the market for gas pressure springs.

Industrial Equipment and Machinery: Gas pressure springs are used in industrial applications for heavy machinery, toolboxes, access doors, and more. The industrial sector's demand for improved safety, ease of operation, and efficient equipment usage contributes to the market growth.
