Gas Process Filters are used for removal of solid particles, contaminants and other foreign substances in gas. Fluid or particulate contaminations of gas can significantly impair the service life of major components of systems and plants. Therefore, this can result in costly maintenance and repair work, or even complete downtime. Indeed, the aim is the reliable removal of particles (sand, dust, abrasion, paraffin, asphaltene, etc.) and fluids (aerosols, oil mist, condensate, etc.).

Gas process filter is known throughout industry as the service life assurance for major components of systems and plants, reducing the risk of leaks from forming.
