A gas release alarm is a device used to monitor and alarm for gas leaks. It can detect the concentration of specific gases in the environment and sound an alarm when the concentration exceeds a preset threshold to alert people of possible dangers. Gas release alarms usually consist of sensors, controllers and alarms. The sensor is the core part of the alarm and is used to sense the concentration of specific gases in the environment. The controller is responsible for receiving the sensor signal and judging and processing it according to the preset threshold. When it is detected that the gas concentration exceeds the set threshold, the controller will trigger the alarm to send out a sound or light signal to alert people of possible gas leaks.
