The global Gas Sealed Sampler market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The gas sealed sampler is a device specially designed for collecting and storing gas samples. It isolates the sample to be taken from the external environment through a specific method, and performs sampling in a closed state to ensure the accuracy and reliability of sampling, while preventing the sample from being contaminated or damaged. The sample enters the sampling cylinder through the inlet valve and circulates or discharges into the flare system through the outlet valve. The sample is always in a flowing state in the cylinder, so a very representative sample can be obtained. The sampling system reduces the labor intensity of sampling work, and the fully closed design ensures safe operation and reduces harm to the environment.

United States market for Gas Sealed Sampler is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
