Gas-to-Liquids Process Oil is a high-quality synthetic oil produced through the GTL technology, which converts natural gas into liquid hydrocarbons. This process involves Fischer-Tropsch synthesis to create clean, highly refined base oils with consistent molecular structures. Gas-to-Liquids Process Oils are characterized by low volatility, high purity, excellent oxidation stability, and low sulfur content, making them suitable for a wide range of industrial and consumer applications, including lubricants, plasticizers, and as a feedstock for chemical production. Their superior performance properties make them an environmentally friendly alternative to conventional mineral oils.
