Gas Tumble Clothes Dryer is a home appliance that uses natural gas or propane as the primary energy source for clothes drying. It generates heat by burning gas, and the hot air is transported by the blower into the rotating drying drum to evenly heat and dry the clothes. Gas dryers generally dry clothes faster and are more energy efficient than electric dryers because gas combustion can quickly generate large amounts of heat, reducing drying time. This dryer is also equipped with various sensors and settings, such as a humidity sensor, timer, and multiple drying modes to optimize the drying process and prevent over-drying or damage to the clothes.

The global Gas Tumble Clothes Dryer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
