The global Gasket for Plate Heat Exchanger market size is predicted to grow from US\$ 397 million in 2025 to US\$ 544 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

A gasket for plate heat exchanger is a sealing component used in gasketed plate heat exchangers to prevent the leakage of fluids between the different components of the heat exchanger. Heat exchangers are devices designed for the efficient transfer of heat from one fluid to another. They are commonly used in various industrial processes, HVAC (Heating, Ventilation, and Air Conditioning) systems, and other applications where heat transfer is essential.

The gasket for plate heat exchanger market has shown a slight downward trend in recent years. With the continuous development of the industrial field, especially the increasing demand for heat exchange equipment in industries such as chemicals, petroleum, and electricity, the gasket for plate heat exchanger market is expanding. It is expected that in the next few years, the market will continue to maintain a growth trend, mainly due to the acceleration of the global industrialization process and the higher requirements for energy efficiency.

The European region is an important part of the global gasket for plate heat exchanger market. The chemical, petroleum, and natural gas industries in this region are developed, and the demand for gasket for plate heat exchangers is relatively large. At the same time, the technical level in the European region is relatively high, and the requirements for product quality and performance are also more strict, which has promoted the continuous innovation and development of the local gasket for plate heat exchanger industry. Secondly, the Asia-Pacific region is one of the fastest-growing

regions in the global gasket for plate heat exchanger market. With the rapid development of emerging economies such as China and India, the demand for heat exchangers in industries such as chemicals, electricity, and steel is growing rapidly, driving the prosperity of the gasket for plate heat exchanger market. At the same time, the labor cost in the Asia-Pacific region is relatively low, which provides a certain cost advantage for the production of gasket for plate heat exchangers.

The global gasket for plate heat exchanger market is highly competitive with numerous participants. Among them, some internationally renowned enterprises, such as Gislaved Gummi and Group MCD, occupy a large market share with their advanced technology, high-quality products, and good brand reputation. In addition, many small and medium-sized enterprises are also competing in the market. They occupy a place in specific fields or regional markets through flexible business strategies and characteristic products, such as AGC Heat Transfer, PHE Nordic, Renocol, HFM, Varalka PHE, Spetech, etc.

In the gasket for plate heat exchanger market, from the perspective of product classification, Glued Gaskets occupy a dominant position, with a market share of up to 80.93%. This indicates that Glued Gaskets have a wide range of applications and a high degree of recognition in this market. This advantage stems from its unique performance characteristics, such as good adhesive performance, sealing performance, and stability within a certain temperature and pressure range.

From the application perspective, HVAC & Refrigeration and Oil & Gas are the main applications, accounting for 21.81% and 24.61% of the total market respectively. This reflects that heat exchangers play a key role in the exploration, processing, and transportation of oil and gas.

In conclusion, the gasket for plate heat exchanger industry, as an important supporting industry in industrial production, has broad market prospects and development space. With the continuous development of the global industry and technological progress, the demand for gasket for plate heat exchangers will continue to grow.
