The global Gasoline direct injection (GDI) Tubes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The gasoline direct injection (GDI) tube is an important part of the gasoline direct injection system. The gasoline direct injection system uses a high-pressure oil pump to pressurize the gasoline and then deliver it to the GDI tube. The GDI tube is usually connected to a fuel injector to accurately inject the high-pressure gasoline into the engine cylinder. During the operation of the engine, according to different working conditions and control signals, the fuel injector in the GDI tube will timely spray gasoline into the cylinder in the form of atomization, and then mix it with air for combustion.
