The global Gasoline and Diesel Additives market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fuel additives generally include gasoline additives and diesel additives, which are used to compensate for the quality problems of fuel itself and the shortcomings of motor vehicle mechanical manufacturing limits, so as to overcome the cold shock effect and gap effect on gasoline engines, remove carbon deposits on intake valves and electronic injectors, and overcome the problems of difficult finer atomization and residual oil droplets on diesel engines. Both gasoline and diesel engine vehicles can achieve the protection of engine operating conditions, achieve more perfect and complete combustion of fuel, thereby achieving the effects of removing carbon deposits, saving fuel, reducing emissions, and enhancing power.
