Abstracts

The global Gasoline Octane Enhancer market size is predicted to grow from US$ 191 million in 2025 to US$ 293 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2024, global gasoline octane enhancer production reached approximately 9,381 K Liters, with an average global market price of around US$ 19.5/Liter.

A gasoline octane enhancer refers to any additive or component introduced into gasoline that elevates its knock resistance (i.e., raises its octane rating), thereby enhancing engine stability and combustion performance. It can include bulk blending agents like ethanol, MTBE/ETBE, aromatic components, as well as trace high-activity compounds such as organometallic or phosphorus additives, some of which also offer detergency or lubrication benefits.

Upstream, gasoline octane enhancers derive from petrochemical or bio-based sources (ethanol) plus precision chemical synthesis (organometallics, detergents). Downstream applications include automotive, motorcycle, etc. Going forward, the global shift toward cleaner, more efficient combustion and higher engine performance will maintain demand for bulk oxygenates/high-octane hydrocarbons, while trace functional enhancers are gaining momentum in retail and performance segments due to their compact dosing and multi-benefits.

United States market for Gasoline Octane Enhancer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
