Gasoline Pelleting Mill refers to a pellet mill powered by gasoline (or gas). Gasoline Pelleting Mills are mainly composed of feeding, mixing, granulating, transmission and lubrication systems. They can be divided into feed pellet mills and biomass energy pellet mills. They are widely used in the pharmaceutical, chemical and food industries. The working process is that the mixed powder with a moisture content of no more than 15% enters the feeding auger from the hopper. By adjusting the speed of the stepless speed regulating motor, a suitable material flow rate is obtained, and then enters the agitator, where it is stirred and mixed with steam through the stirring rod. Mix and temper, then pass through the chute and optional iron suction device to remove iron impurities mixed in the powder, and finally enter the pressing chamber for granulation.

United States market for Gasoline Pelleting Mill is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
