## Abstracts

The global Gasoline Stabilizer market size is predicted to grow from US\$ 763 million in 2025 to US\$ 939 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

Fuel stabilizer keeps gasoline, especially gas with ethanol (E10, E15), from going bad in a vehicle being stored for a half-year or more. Dry gas is the generic term for an additive that works to keep water in the tank or fuel lines from freezing. Using gasoline stabilizer eliminates the need to drain fuel prior to storage by keeping fuel fresh for up to 24 months, and ensures quick easy starts next season by preventing gum and varnish build-up within your engine's fuel system.

The market drivers for this product are the increasing demand for gasoline in various sectors such as automotive, generator, boat, and motorbike, the need to store gasoline for long periods of time in emergency situations or seasonal use, and the rising awareness of the benefits of fuel stabilizers among consumers.

The constraints of this product are the high cost of some fuel stabilizers, the lack of standardization and regulation in the industry, and the environmental concerns associated with the use of chemical additives.

The future opportunities for this product are the development of new and improved formulations of fuel stabilizers, the expansion of the market in emerging regions such as Asia-Pacific and Latin America, and the innovation of new applications and segments for fuel stabilizers.
