Gastric Cancer Therapy is caused by uncontrolled abnormal cell proliferation that has the ability to spread and invade other sections of the body. Changes in the gene cause a single cell or a few cells to expand and replicate, which is when cancer begins. This could lead to the growth of a tumor, which is an abnormal mass of tissue. The creation of cancer cells in the stomach lining is known as Gastric Cancer Therapy or stomach cancer. Diet and stomach disorders are both risk factors for Gastric Cancer Therapy. Stomach pain, poor appetite, weight loss, indigestions, nausea, vomiting with or without blood are some of the symptoms of Gastric Cancer Therapy.
