Abstracts

The global Gastroenterology Electrosurgical Units (ESUs) market size is predicted to grow from US\$ 802 million in 2025 to US\$ 1326 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

A gastroenterology electrosurgical unit is a specialized radiofrequency medical instrument. It transmits high-frequency alternating current through endoscopic electrodes to internal digestive tissues, achieving precise cutting, hemostasis and lesion ablation. It is widely used in minimally invasive diagnosis and treatment of stomach, intestine and digestive tract diseases, featuring small trauma and fast postoperative recovery. Imported high-end gastroenterology electrosurgical units are priced at \$9000-\$52000 each. Domestic mid-end products cost \$3800-\$23000, and basic models sell for \$1000-\$3500. The industrial chain consists of upstream raw materials and core components, midstream equipment assembly and consumable manufacturing, as well as downstream hospital clinical application. Expanding gastrointestinal minimally invasive treatment demands fuels industrial growth.

Market Driving Factors

The large number of patients with digestive tract diseases and rising public health awareness boost the popularization of gastrointestinal minimally invasive diagnosis and treatment, generating steady demand for equipment procurement and renewal and consolidating industrial foundation.

Gastroenterological treatment develops towards minimal invasion and precision. Higher clinical standards for lesion resection and hemostasis accelerate the adoption of specialized electrosurgical devices, expanding the market space of high-end products.

Upgrading endoscopic electrosurgery and intelligent power control technology improves operational accuracy and safety, adapting to various digestive lesion surgeries and releasing market potential.

Improved clinical medical standards and enhanced grassroots medical capacity eliminate outdated equipment, stimulating market demand for qualified and high-performance gastroenterology electrosurgical units.

Market Challenges

Emerging treatment devices such as argon plasma coagulator and cryoablation gain wider application, capturing clinical scenarios and reducing the market share of traditional electrosurgical units.

Core radiofrequency modules and endoscopic electrodes are highly dependent on imports. Fluctuating prices of medical materials and electronic components raise production costs and narrow profit margins.

Severe product homogenization among small and medium manufacturers leads to fierce price competition, hindering industrial technological innovation and high-end development.

High technical barriers exist in product research and manufacturing. Overseas giants dominate core technologies and mainstream markets. Strict international certifications and unstable supply chains bring obstacles for domestic enterprises.
