The global GC/MS System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Gas chromatography-mass spectrometry (GC/MS) systems are analytical instruments that combine the separation capabilities of gas chromatography with the identification and quantification capabilities of mass spectrometry. While GC/MS has been widely used in various fields such as environmental analysis, forensics, and pharmaceuticals, new application areas are continually emerging. One such area is:

Cannabis Testing: With the legalization of cannabis in several regions, there is a growing need for reliable and accurate testing methods to assess the quality, potency, and safety of cannabis products. GC/MS systems are being utilized for the analysis of cannabinoids, terpenes, residual solvents, pesticides, and other contaminants in cannabis and cannabis-derived products.

Food and Beverage Analysis: GC/MS systems are finding new applications in food and beverage analysis. They are employed for the detection and quantification of flavor compounds, aroma compounds, food additives, pesticides, mycotoxins, and other contaminants in various food and beverage matrices. GC/MS helps ensure the safety and quality of products and assists in product development and quality control processes.

Metabolomics: Metabolomics is the study of small molecules (metabolites) present in biological systems. GC/MS systems are utilized for metabolomic profiling and targeted analysis of metabolites in biological samples, such as blood, urine, and tissue extracts. This enables researchers to understand metabolic pathways, identify biomarkers, and study disease mechanisms.

Environmental Volatile Organic Compounds (VOCs) Analysis: GC/MS systems have been traditionally used for the analysis of volatile organic compounds (VOCs) in environmental samples. However, new application areas are emerging, including

Petrochemical and Energy Industry: GC/MS systems play a crucial role in the petrochemical and energy industry for the analysis of hydrocarbons, fuels, and other complex mixtures. They are utilized for quality control, process optimization, and environmental monitoring, including the detection of pollutants and characterization of petroleum products.

Pharmaceutical Impurity Analysis: GC/MS systems are employed in the pharmaceutical industry for the analysis of impurities, degradation products, and residual solvents in drug substances and drug products. They help ensure compliance with regulatory guidelines and quality standards and support formulation development and stability studies.
