## Abstracts

The global Gear Blanks market size is predicted to grow from US\$ 77400 million in 2025 to US\$ 116271 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global sales of gear blanks reached 86 million tons, with an average selling price of US\$920 per ton. Gear blanks refer to the basic metal blanks used for subsequent gear cutting, heat treatment, and finishing. They are typically formed through forging, continuous casting and rolling, or die forging and are core intermediate products in gear manufacturing for automotive, construction machinery, wind power, and industrial transmission systems. Upstream raw materials mainly include carbon structural steel, alloy structural steel, and a small amount of micro-alloy steel; the midstream consists of forging and steel deep processing enterprises; and the downstream mainly supplies automotive transmission manufacturers, industrial gearbox manufacturers, and construction machinery and wind power gear manufacturers. In 2025, the total global production capacity of gear blanks was approximately 98 million tons, with an average industry gross profit margin of approximately 18%. With the continued expansion of new energy vehicles, wind power equipment, and high-end industrial equipment, the demand for high-strength, highly consistent gear blanks has significantly increased. Coupled with the application of lightweight materials, precision forging, and the promotion of domestic high-end substitution, gear blanks have sustained demand growth and clear business opportunities in the fields of high-performance alloy steel, customized blanks, and new energy equipment supporting applications.
