A gear grinding cutter usually refers to a tool used for machining gears, also called a gear grinding cutter or a gear hobbing cutter. It is a cutting tool used to cut tooth profiles on gears to ensure the accuracy and quality of the gears. Gear cutters are typically made of high-speed steel or carbide and have special tooth shapes and cutter geometries to facilitate the formation of the correct tooth profile on the surface of the gear. Compared with other cutting tools, gear grinding cutters can machine gears efficiently while ensuring gear accuracy and surface quality. Gear cutting cutters are often used with gear cutting machines to gradually cut the tooth shape onto the surface of the gear by rotating and moving the gear cutting cutter. This processing method enables high-precision gear processing and is therefore widely used in the industrial field of gear manufacturing.
