Gear grinding is the name of a specific gear creation technique. Grinding involves the removal of unwanted materials through an abrasion process. Grinding is typically the last step in the gear creation process; other techniques have removed the majority of the material first. There are several methods of grinding, but not all of them are used for the creation of gears. In addition to the gear creation meaning, gear grinding is the common term for incorrectly shifting a manual transmission vehicle.

The global Gear Grinding market size is projected to grow from US\$ 905 million in 2024 to US\$ 1139 million in 2030; it is expected to grow at a CAGR of 3.9% from 2024 to 2030.
