Abstracts

The global Gel Dyed Fiber market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Compared with the traditional dyeing process, the gel dyeing process has the advantages of high dye absorption rate, low dye consumption, and less colored sewage. It can not only eliminate the defects and uneven dyeing in the downstream dyeing process, but also avoid the prominent "three wastes" treatment problem in the downstream dyeing process, realizing environmental protection production. Among them, gel dyed acrylic fiber, as a product with large quantity and wide range, is not only bright in color and complete in color spectrum, but also better in levelness, dyeing fastness and reproducibility than later dyed products due to the use of computer color measurement and matching system for sample color matching and production line monitoring.
