In 2024,global Gelatin Hydrolysates production reached approximately 150,157 tons, with an average global market price of around USD 8,000 per ton. A factory gross profit of USD 2,960 per ton with 37% gross margin. A single line full machine capacity production is around 2,000 tons per line per year. Downstream demand is concentrated in food & beverages, nutraceuticals/supplements, pharmaceuticals, cosmetics/personal care and other industrial applications. Gelatin hydrolysates are proteins created by further breaking down gelatin (derived from animal collagen) into smaller peptide chains using water and enzymatic processes. This hydrolysis results in a substance that is more easily absorbed by the body, often referred to as collagen peptides. The breakdown process reduces the protein chains' size, altering properties like gel strength and increasing the product's solubility.
