The global Gene Array Chip market size is predicted to grow from US\$ 156 million in 2025 to US\$ 205 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Agricultural microarray chips, also known as agricultural gene chips, are high-throughput biological detection tools that immobilize a large number of gene probes on solid carriers. Based on the principle of nucleic acid base complementary pairing, they are widely used for high-throughput genotyping, germplasm identification and molecular breeding analysis of crops, livestock and poultry. In terms of price, imported chips cost about 200?500 yuan per sample, while domestic ones have dropped to 29?100 yuan. In the industrial chain, the upstream includes probe design, chip manufacturing, equipment and reagent suppliers such as Illumina and Boruidi; the midstream provides testing services and data analysis; and the downstream covers seed breeding, variety authenticity identification, germplasm resource protection and agricultural functional genomics research.

United States market for Gene Array Chip is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
