Disposable anesthesia breathing circuits are single-use medical devices designed to deliver anesthetic gases and oxygen to patients undergoing surgical procedures. These circuits typically consist of flexible tubing that connects the anesthesia machine to the patient's airway, ensuring the precise delivery and removal of gases. Made from materials like plastic and silicone, these circuits are engineered for safety and efficiency, minimizing the risk of infection and cross-contamination. After a single use, they are discarded, which helps maintain a sterile environment and simplifies the cleaning process for medical staff.
