According to our LPI (LP Information) latest study, the global General Hanger market size was valued at US\$ million in 2023. With growing demand in downstream market, the General Hanger is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global General Hanger market. General Hanger are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of General Hanger. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the General Hanger market.

There are three basic types of clothes hangers. The first is the wire hanger, which has a simple loop of wire, most often steel, in a flattened triangle shape that continues into a hook at the top. The second is the wooden hanger, which consists of a flat piece of wood cut into a boomerang-like shape with the edges sanded down to prevent damage to the clothing, and a hook, usually of metal, protruding from the point. Some wooden hangers have a rounded bar from tip to tip, forming a flattened triangle. This bar is designed to hang the trousers belonging to the jacket. The third kind and most used in today's world are plastic coat hangers, which mostly mimic the shape of either a wire or a wooden hanger. Plastic coat hangers are also produced in smaller sizes to accommodate the shapes of children's clothes.

The global general hanger market is expected to witness steady growth due to the continuous demand from the clothing retail industry and residential consumers. Trends

towards sustainability and customization, along with the influence of e-commerce, will shape the market as manufacturers strive to meet evolving customer needs and preferences.
