## Abstracts

The global General-purpose Evaporative Light Scattering (ELS) Detector market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A general-purpose Evaporative Light Scattering (ELS) detector is an analytical instrument used in liquid chromatography to detect and quantify compounds that do not absorb UV light or fluoresce. It works by nebulizing the eluent from the chromatography column into a fine mist, followed by evaporating the solvent, leaving behind non-volatile solute particles. These particles are then illuminated by a laser, and the scattered light is measured to detect the presence and concentration of the analytes. ELS detectors are versatile and can be used with a wide range of mobile phases and compounds, making them ideal for analyzing non-chromophoric substances such as lipids, polymers, and carbohydrates. They are commonly used in pharmaceutical, biochemical, and food industries for quality control and research purposes. The ability to provide universal detection, independent of the analyte?s optical properties, makes the general-purpose ELS detector a valuable tool in analytical laboratories.

United States market for General-purpose Evaporative Light Scattering (ELS) Detector is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
