The global General Purpose Exoskeleton Robot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A general-purpose exoskeleton robot is a wearable mechanical device that enhances or restores the body's motor function through an exoskeleton structure and power system. It is suitable for a variety of application scenarios, including medical rehabilitation, industrial assistance, military rescue, and daily life assistance. A general-purpose exoskeleton robot can provide additional strength and endurance, reduce the user's physical burden, and improve work efficiency and quality of life. Through sensors and intelligent control systems, it can accurately respond to the user's movement needs and is widely used in medical, industrial, military, and personal assistance fields.

Universal exoskeleton robots represent the forefront of human enhancement and rehabilitation technology, not only providing hope for walking and movement for patients in need of rehabilitation, but also providing the possibility of enhancing strength and endurance for industrial workers, military personnel and ordinary users. With the advancement of technology and the reduction of costs, universal exoskeleton robots are expected to be more widely used in the future, significantly improving working conditions, increasing productivity, and improving the quality of life. However, in order to ensure its widespread application, challenges such as technical complexity, user acceptance and regulatory supervision need to be addressed.
