The global General Purpose Varistors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

General purpose varistors are electronic components used primarily for overvoltage protection in circuits. They are usually made of zinc oxide ceramics and have nonlinear resistance characteristics. Within the normal operating voltage range, their resistance is very high and almost negligible. But when an overvoltage appears in the circuit (such as a sharp rise in voltage due to lightning strikes, inductive load switching, or operating errors), the varistor quickly changes to a low resistance state, directing the overvoltage to the ground or other low-voltage areas, thereby protecting other components in the circuit from damage.

United States market for General Purpose Varistors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
