Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the General Surgical Robots market.

The surgical system is an advanced robotic platform designed to perform complex surgical procedures using a minimally invasive approach. When using a robot for surgery, the doctor's hands do not touch the patient. Once the incision position is determined, a robotic arm equipped with a camera and other surgical tools will perform operations such as cutting, hemostasis, and suture. The surgeon only needs to sit on the console of the operating room and observe and guide the robotic arm. It is reported that this technology allows doctors to perform surgery on patients at one end of the earth. At present, the most common robotic surgery is gradually increasing, such as bariatric surgery, Heller myotomy, gastrectomy, hernia repair, gallbladder removal Surgery, oral surgery and pancreatectomy.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
