The research report highlights the growth potential of the global Generative Pre-trained Transformer (GPT) market. Generative Pre-trained Transformer (GPT) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Generative Pre-trained Transformer (GPT). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Generative Pre-trained Transformer (GPT) market.

Generative pre-trained transformers (GPT) are a type of large language model (LLM) and a prominent framework for generative artificial intelligence.[4][5] The first GPT was introduced in 2018 by the American artificial intelligence (AI) company OpenAI. GPT models are artificial neural networks that are based on the transformer architecture, pre-trained on large data sets of unlabelled text, and able to generate novel human-like content. As of 2023, most LLMs have these characteristics and are sometimes referred to broadly as GPTs.
