The global Generator Step-up Transformers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The step-up transformer has a relatively strong boosting capability and a good boosting effect. The difference is that the non-excited voltage regulator switch does not have the ability to load shift gears, because the tap changer has a short-time disconnection process during the shifting of the gear position. Disconnecting the load current will cause arcing between the contacts. Bad tap changer or short circuit, so the transformer must be powered off when shifting. Therefore, it is generally used for transformers that do not require strict voltage requirements and do not require frequent shifting.
