The global Generic Peptides market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Generic peptides are alternative versions of peptides that have the same or similar amino acid sequences as their brand-name counterparts. These peptides are produced after the expiration of the patent protection for the original peptide, allowing other pharmaceutical companies to manufacture and sell them. Generic peptides are designed to be therapeutically equivalent to the original peptides, providing similar efficacy, safety, and quality.

The market for generic peptides is currently experiencing rapid growth, driven by advancements in the global biopharmaceutical sector. With increasing demand for personalized therapies, generic peptides demonstrate broad application prospects in treating various diseases. The market size is expanding, and sales are continuously growing. As a part of biopharmaceuticals, generic peptides offer higher specificity and lower side effects, making them widely utilized in multiple fields, including cancer treatment, immune modulation, and chronic disease management. In the future, with ongoing technological innovations and in-depth medical research, the generic peptides market is expected to further broaden, providing innovative treatment options for patients worldwide.
