GM is a technology that involves inserting DNA into the genome of an organism. To produce a GM plant, new DNA is transferred into plant cells. Usually, the cells are then grown in tissue culture where they develop into plants. The seeds produced by these plants will inherit the new DNA.

Depending on the regulatory approval procedure, new genetically modified seeds are likely to be introduced and are anticipated to be available during the forecast period. Indian institutions are heavily involved in the development of genetically modified seeds for 13 crops, including rice, wheat, and sugarcane, to increase yield and quality.
