According to our LPI (LP Information) latest study, the global Gensets market size was valued at US\$ 36360 million in 2023. With growing demand in downstream market, the Gensets is forecast to a readjusted size of US\$ 53030 million by 2030 with a CAGR of 5.5% during review period.

The research report highlights the growth potential of the global Gensets market. Gensets are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Gensets. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Gensets market.

A genset (generator set) is used to power the reefer container when normal shore power is not available. E.g. when trucking over long distances or when chilled or sensitive cargo is being moved. The majority of the gensets are clipped on to the upper front of the reefer container (clip-on genset). Another type of genset can be attached to the standard chassis frame (underslung genset).

Inadequate power supply along with accelerated demand for reliable and continuous power will stimulate the global generator sets market size. The industry is extensively driven on account of expanding population and urbanization on a global scale. Increasing intensity and frequency of weather-related disasters resulting in prolonged outages will further boost the product adoption.
