The global Geological Disaster Intelligent Prevention Cloud Platform market size is predicted to grow from US\$ 2306 million in 2025 to US\$ 3987 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

The Geological Disaster Intelligent Prevention Cloud Platform is a digital management platform that uses the Internet of Things, remote sensing, Geographic Information System (GIS), and big data analysis as its core technologies to uniformly monitor, analyze, and provide early warnings for geological disasters such as landslides, collapses, debris flows, and ground subsidence. By connecting to front-end monitoring equipment (such as sensors for displacement, rainfall, tilt angle, and cracks) and multi-source data, the platform enables real-time perception of disaster risks, trend analysis, and tiered early warnings. It also provides government departments with visualized command, emergency dispatch, and decision support, serving as a crucial information infrastructure for the transformation from traditional 'passive response' to 'proactive prevention and early warning' of geological disasters.
