According to this study, the global Geology and Mine Planning Software market size will reach US\$ 1498 million by 2031.

Geology and Mine Planning Software is a type of mine software that can help mining engineer to integrate the mine processes together, form the flow of Geological Model to Design to Plan to Production Schedule and to other flows.

Global core geology and mine planning software manufacturers include Dassault Systemes (GEOVIA), Maptek (Vulcan), Datamine (MineScape) etc. The top 3 companies hold a share about 50%.

Market Drivers

Rising Demand for Mineral Resources: Global industrialization and green energy transitions (e.g., lithium, cobalt, rare earth elements) drive exploration activities. Mining companies need advanced geological modeling and mine planning tools to optimize resource extraction.

Adoption of Digital and Automated Mining Solutions: Shift from traditional methods to AI, machine learning, and big data analytics for ore body modeling. Automated drill planning, geostatistics, and 3D visualization improve accuracy and reduce costs.

Sustainability and Regulatory Compliance: Stricter environmental regulations (e.g., ESG compliance, mine rehabilitation) require precise planning software. Reducing carbon footprint through optimized mine designs and waste management.

Cost Efficiency and Operational Optimization: Declining ore grades necessitate advanced software for high-precision resource estimation. Integrated mine planning tools help minimize downtime and maximize productivity.
