The global Geosteering Software market size is predicted to grow from US$ 535 million in 2025 to US$ 760 million in 2031; it is expected to grow at a CAGR of 6.0% from 2025 to 2031.

Geosteering software is a specialized technological tool used in the oil and gas industry that enables real-time decision-making during the drilling process. It integrates data from multiple sources such as well logs, seismic information, and measurements from downhole tools to create accurate subsurface models. These models are then analyzed to provide drillers with precise guidance on adjusting the wellbore path, allowing them to optimize the well's trajectory to stay within the desired target zones, maximize reservoir contact, and enhance hydrocarbon recovery while minimizing risks associated with drilling outside productive areas or encountering geological hazards.
