The report requires updating with new data and is sent in 48 hours after order is placed.

The global Geotechnical Sensors market size is predicted to grow from US\$ 396 million in 2025 to US\$ 628 million in 2031; it is expected to grow at a CAGR of 8.0% from 2025 to 2031.

Geotechnical sensors can provide information about the physical properties of the subsurface environment, for example, density, competence, and thickness of layers of soil or sediment. Sensors can provide information about stratigraphy, estimate depth to groundwater, or approximate hydraulic conductivity. An investigator must understand the properties and structure of soils and sediments to characterize a site accurately, as these conditions will affect sampling strategies and selection of technologies.

Knowledge of the subsurface will also be critical when determining the location, extent, fate and transport, and attenuation of subsurface contaminants.

Global Geotechnical Sensors key players include Geokon, Keller Group, Nova Metrix, Fugro N.V., Roctest, etc. Global top five manufacturers hold a share over 75%.

North America is the largest market, with a share about 40%, followed by China, and Europe, both have a share over 40 percent.

In terms of product, Strain Gages is the largest segment, with a share over 35%. And in terms of application, the largest application is Tunnels and Bridges, followed by Buildings and Utilities, Dams and Levees, etc.
