The global Geotechnical & Structural Monitoring Instruments market size is predicted to grow from US$ 663 million in 2025 to US$ 1179 million in 2031; it is expected to grow at a CAGR of 10.1% from 2025 to 2031.

This report mainly focus on Geotechnical & Structural Monitoring Instruments market.

Geotechnical and structural instrumentation is used to monitor the performance of ground and structures, for example in deformation monitoring process. Deformation monitoring (also referred to as deformation survey) is the systematic measurement and tracking of the alteration in the shape or dimensions of an object as a result of stresses induced by applied loads. Deformation monitoring is a major component of logging measured values that may be used to for further computation, deformation analysis, predictive maintenance and alarming.

Deformation monitoring is primarily related to the field of applied surveying, but may be also related to civil engineering, mechanical engineering, construction, and geology. The measuring devices used for deformation monitoring depend on the application, the chosen method, and the preferred measurement interval.

Global Geotechnical & Structural Monitoring Instruments key players include Leica Geosystems AG (Hexagon), Nova Metrix, Geokon, etc. Global top three manufacturers hold a share over 45%.
