The Geotextile Water Permeability Tester is a testing instrument used to measure the water permeability performance of geotechnical materials such as geotextiles and geomembranes. These materials are commonly used in fields such as earthwork engineering, water conservancy engineering, transportation engineering, and environmental protection engineering. Therefore, it is important to test their water

permeability performance. The Geotextile Water Permeability Tester can measure parameters such as the permeation coefficient, rate, and pressure of geotechnical materials. This data can be used to evaluate the quality of the material, determine its feasibility in practical applications, and provide a basis for design and construction. The Geotextile Water Permeability Tester is easy to operate and provides accurate and reliable test results. It has become an essential testing equipment in the production and application of geotechnical materials.
