The global Geotextiles market size is predicted to grow from US\$ 5178 million in 2025 to US\$ 8491 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Geotextiles are permeable fabrics, made from either polypropylene or polyester. When used in several different applications, mainly associated with soil, geotextiles have the ability to separate, filter, reinforce, protect, or drain. 2025, global geotextiles production reached approximately 3459.58 K MT. The upstream segment of the geotextiles industry mainly consists of polymer fibers, chemical additives, and manufacturing equipment. Polypropylene (PP) fibers and polyester (PET) fibers are the dominant raw materials, with PP being the most widely used due to its excellent chemical resistance and cost advantages, while PET is typically selected for applications requiring higher tensile strength, thermal stability, and creep resistance. Functional additives such as antioxidants, UV stabilizers, and color masterbatches are also used to enhance durability.

Geotextiles are functional geosynthetic materials made primarily from synthetic fibers and are widely used in civil and environmental engineering applications. Their key functions include separation, filtration, drainage, protection, and reinforcement. Driven by ongoing urbanization, sustained investment in transportation and water infrastructure, and increasing demand for flood control, environmental protection, and ecological restoration, geotextiles have become an essential component of modern infrastructure development. From a product perspective, nonwoven geotextiles dominate the market due to their superior filtration and drainage performance, while woven geotextiles play a critical role in reinforcement and load-bearing applications. Overall, the geotextiles market is characterized by steady demand growth, diversified application scenarios, and a clear trend toward higher performance and standardized products, with market dynamics closely linked to long-term infrastructure investment

cycles across regions.
