## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Geotextiles and geogrids are types of the geosynthetic materials. Geosynthetics are the material obtained naturally or are produced synthetically. Geotextiles are produced by the use of natural fibers or synthetic fibers. On the other hand, geogrids are produced by the use of different polymeric materials. The commonly used fibers to make geotextiles and geogrids are polyester, polypropylene, and polyethylene. The major use of the geotextiles and geogrids are for soil strengthening, erosion control, filtration and drainage, constructing structures on soft soil, removal of water, and for water separation.

Over the next five years, LPI(LP Information) projects that Geotextiles and Geogrids will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
