The global Geothermal Generator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A geothermal generator is a power generation system that harnesses heat from the Earth's internal thermal energy to produce electricity. It typically utilizes geothermal reservoirs, which are areas where hot water or steam is naturally present underground. The generator extracts this heat through wells or boreholes and uses it to generate steam, which drives turbines connected to electrical generators. Geothermal generators can operate using either steam or binary cycle technology, where a heat exchanger transfers heat from geothermal fluid to a secondary fluid with a lower boiling point, such as isobutane or pentane, which then drives a turbine. Geothermal power generation is considered a renewable energy source with low greenhouse gas emissions and provides a stable and reliable source of electricity, particularly in regions with high geothermal potential.

United States market for Geothermal Generator is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
