The global Gerber Centrifuge market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Gerber centrifuge is used for standard physical and chemical testing of relative density and fat of milk and dairy products by Geber's method and Inihoff's alkali method. Gebo centrifuge has the function of heating and constant temperature. It is mainly suitable for the physical and chemical inspection of dairy products and is a routine equipment for dairy product inspection. The temperature of the milk fat tube of the Geber centrifuge/cream centrifuge is kept above 50°C during the centrifugation process, which can not only reduce the time of the sample water bath, but also make the test results more reliable.

United States market for Gerber Centrifuge is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
