The global Germanium Dioxide (GeO₂) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Germanium dioxide, also known as inorganic germanium, as another chemical form of germanium, can be used to manufacture optical glass phosphors, and can be used as a catalyst for conversion, dehydrogenation, adjustment of gasoline fractions, color film and polyester fiber production during petroleum refining. Not only that, germanium dioxide is also a catalyst for polymerization reactions. Glasses containing germanium dioxide have high refractive index and dispersion properties, and can be used as wide-angle cameras and microscope lenses. With the development of technology, germanium dioxide is widely used in the production of High-purity metal germanium, germanium compounds, chemical catalysts and pharmaceutical industry, PET resin, electronic devices, etc.
